SMS Executive Summary

Long Island MacArthur Airport (ISP) has implemented a Safety Management System (SMS) reporting program. The SMS program is available for use by all ISP tenants and airport staff. The SMS program is an anonymous and non-punitive safety reporting program that will allow the ISP Airport Management and Safety Team to review all safety reports that are filed and allow the Safety team to work to mitigate these problems if they arise.

The overall goal of the SMS program is to create a safer environment for all employees and tenants alike; it will also allow the ISP Safety Team to identify safety concerns if a trend is identified. The SMS program has a one-year an implementation period from the Spring of 2024 to the Spring of 2025; during this time ISP will add a link on the www.flymacarthur.com website for quick access to the SMS submission portal along with physical materials to be posted throughout the Long Island MacArthur Airport main terminal.
